

SafeNet Professional Services

Maximize the Value of Your SafeNet Security Solution

Why SafeNet Professional Services?

- Expertise built on over 25 years of data security leadership
- Experience deploying, operating, and supporting data security solutions in complex, multi-platform IT environments
 - Best practices derived from hundreds of real world engagements with organizations of all sizes across all industries
- Industry-leading training and certification program
- Commitment to customer satisfaction and success
 - Global network of skilled partners who deliver solutions to meet your unique requirements

Reduce Cost of Deployment

SafeNet Professional Services can help you quickly realize the full value of your SafeNet security solution, as well as reduce the cost and complexity of deployment and operation. Many organizations recognize the importance of encryption for the protection of sensitive data, but they lack the internal resources and knowledge to properly deploy an encryption solution and maximize its value. With SafeNet Professional Services, you can rest assured that you will receive the optimal security solution for your unique requirements – on time and on budget.

Proven Expertise

Encryption security solutions are inherently complex. Our Professional Services consultants have extensive experience in deploying and integrating SafeNet encryption solutions into your IT environment – an expertise built on over 25 years of information security leadership. From database protection to key management, our team has deployed hundreds of successful solutions across a wide range of IT environments and industries.

SafeNet Professional Services Portfolio

SafeNet offers a complete portfolio of services for customers to accelerate deployment, optimize performance, and ensure proper protection of sensitive data. Count on SafeNet Professional Services to help you address your toughest data security challenges and quickly maximize the return on investment in your SafeNet security solution.

Data Discovery Services

SafeNet Professional Services consultants can assist you in the discovery of sensitive data residing in databases and files throughout your network. Through the use of SafeNet's proprietary Data Discovery Tools, our Professional Services consultants can quickly assist in the identification of sensitive data at rest that should be considered for classification and robust protection.

Rapid Deployment Services

Our experienced SafeNet Professional Services consultants follow a proven methodology that ensures rapid and cost-effective deployment. Each project is initiated with an in-depth analysis of your unique business needs and IT environment. Based upon the results of our analysis, we design, configure, implement, and test your data security solution, comprised of industry-leading SafeNet and partner technologies. Finally, we deliver the system integration and ongoing support required to realize the full value of your data security solution.

Training Services

SafeNet Training Services delivers unrivaled technical training on SafeNet solutions and data security best practices. SafeNet training ensures rapid knowledge transfer to help you accelerate the deployment of SafeNet solutions and provides the skills necessary for administration on a day-to-day basis, allowing you to realize the maximum benefit from robust data security. SafeNet training also increases data protection knowledge and sharpens the skills necessary to increase the security and compliance posture of your organization.

Data Security Health Check

To ensure the effectiveness of your data security controls, SafeNet offers a Data Security Health Check of your SafeNet implementation where our security specialists perform a thorough review of data flow, encryption, key management, security policies, and network architecture.

SafeNet Enterprise Data Protection

SafeNet Professional Services are a key component of SafeNet's comprehensive Enterprise Data Protection (EDP) solution to reduce the cost and complexity of regulatory compliance, data privacy, and information risk management. SafeNet EDP is the only solution that secures data across the connected enterprise, from core to edge, with 360-degree protection of data at rest, data in transit, and data in use. Unlike disparate, multi-vendor point solutions that can create limited "islands" of security, SafeNet EDP provides an integrated security platform with centralized policy management and reporting for seamless, cost-efficient management of encrypted data across databases, applications, networks, and endpoint devices. For more information, visit www.safenet-inc.com/EDP.
